Sleep-EDF LOSO, 78 subjects, one seed (preliminary):
a nonlinear residual survives a per-fold-tuned 127-lag ridge at every horizon, 10–320 ms
mean over 78 held-out subjects,
95% subject-bootstrap CI
persistence
ridge, 16 lags α = 20
ridge, 127 lags, tuned α
GRU residual stack
isolated test MSE (z-units, lower is better)
forecast horizon (ms)
GRU advantage after baseline tuning
(points below dashes falsify the claim)
ΔMSE per subject: tuned ridge − GRU stack
no advantage
77/78
78/78
75/78
72/78
forecast horizon (ms)
160 ms, per-subject pairs:
75/78 below the identity line
identity (no advantage)
GRU-stack MSE per subject (160 ms)
tuned-ridge MSE per subject (160 ms)
